PROFILE

Flutter Developer (Fresher) passionate about building modern and responsive mobile applications using Flutter and Dart. Experienced in Provider state management, REST API integration, and clean UI design. Strong understanding of mobile app architecture, debugging, and performance optimization. Eager to learn new technologies and contribute to building high-quality mobile solutions.

PROJECT

Hospital Management Apps (Live)

- Tech Stack: Flutter, Dart, Node.js, Firebase, REST API, MySQL, Third Party.
- Developed a full-featured Hospital Management Mobile Application designed to streamline hospital operations and patient services Education Designed and implemented core modules including: Patient registration & management. Doctor profiles, availability & scheduling Appointment booking system Medicine & prescription management Built backend REST APIs using Node.js and successfully integrated them with the Flutter mobile application Implemented secure authentication, role-based access, and real-time data handling Focused on scalability, performance optimization, and clean UI/UX .

Samaroh - Banquet / Hall Booking Mobile Application (Live)

- Technologies: Flutter, Provider, REST APIs, Razorpay
- Project Description
- Developed a full-featured Hall / Banquet Booking Mobile Application that allows users to search, view, and book banquet halls for events like weddings, parties, and corporate functions.
- Developed a complete hall booking system using Flutter.
- Implemented booking flow with real-time price calculation
- Integrated Razorpay payment gateway for secure online payments.
- Implemented user authentication, profile management, and booking history.
- Used Provider for state management to ensure smooth performance.
- Designed responsive UI and optimized performance.

TaskMate - Task Management App with Location Tracking

- Developed TaskMate, a Flutter-based task management app with full CRUD functionality, image upload, and real-time GPS location tracking. Implemented network detection (WiFi/Mobile Data) and handled online/offline scenarios using Provider for state management.
