About

Passionate Backend and GenAi(AI/ML) developer with a strong problem-solving mindset and successfully delivered freelance projects. Deeply interested in web technologies and their potential to transform the internet and AI to make the data intensive solution and automation. Skilled in building responsive, modern web applications with Ai and llm integration that adapt seamlessly across devices. Focused on writing clean, efficient code and staying current with evolving front-end and back-end practices.

Education

Galgotias University

Btech in Computer Science

Sept 2022 – July 2026

- GPA: 8.1/10.0
- **Coursework:** DataStructures and Algorithms, Object oriented programming, C++ , System design , Full-stack development , AI/ML

Experience

Backend Developer

Web3task

Dec 2025 - Jan 2026

- Designed and developed an **LLM(AI)-powered backend service** using **Node.js and Express**, capable of answering user queries with **context-aware, citation-backed responses**
- Implemented **query classification and intent analysis** to route user questions efficiently, improving response relevance and reducing unnecessary LLM calls.
- Built an **automated web search and data extraction pipeline** using **Axios and Cheerio**, followed by custom data-cleaning logic to ensure high-quality contextual inputs for the LLM.
- Integrated **LLM orchestration and response post-processing**, delivering structured JSON outputs (answers + sources) optimized for consumption by web and mobile frontends.
- Deployed the cloud functions on GCP and firebase(rules, indexes) .

Full Stack Developer

TradeMasterStock

[TradeMasterStock](#) 

Dec 2024 - Feb 2025

- Developed a course-selling website using Next.js (App Router) and TypeScript for improved performance and maintainability resulting in 40 percent faster page loading speed
- Implemented a lead capture form to collect visitor details (name, mobile number, email) before purchase.
- Designed and developed API routes .(using Nodejs and express for making the end points)
- Deployed and managed hosting on Hostinger

Projects

Ecommerce platform with image editing and ai feature for better customer experience

github.com/Glax3max/DevInteriors

- Integrating image enhancement tool allowing customers to visualize products in different settings, improving purchase confidence and user engagement . (Its an on going project not finished yet)
- Tools Used: Nodejs,javascript,react,tailwind

SocialApp

github.com/Glax3max/SocialSpace

- Developed a fully functional social media platform using MongoDB, Express.js, React, and Node.js
- Implemented user authentication, profile management, and post creation features using JWT and bcrypt for secure login.
- Enabled users to like, comment, and share posts, and created a real-time chat feature using WebSockets.

Technologies

Languages: Python, flask, C++, javascript, typescript, prisma

Web Development: MongoDB, Express.js, React, fastapi, flask, Node.js, React router, Tailwind, Javascript

AI/ML: Langchain, hugging face, LLM, embedding, RAG, Lang graph, Agentic ai.

CloudDevOps: GCP, AWS, firebase, CI/CD, Kubernetes, docker.

App development: React Native

Database Management: MongoDB, postgres, mysql

System design: Microservices, Event-driven architecture, Monolithic, Distributed systems

Version Control: Git, Github

Core CS: OOPs, DBMS, OS, CN, LLD

Achievements

Open-Source Contribution: Hacktoberfest(2025) [Hacktoberfest](#) 

Leetcode: [Leetcode](#)  (1600+ rating)

CodeForces: [Codeforces](#)  (1200+ rating, pupil)

CodeChef: [CodeChef](#)  (1600+ rating, 3 star)
