React

Tailwind CSS

Spline

Redux Toolkit

Weather Api

- ◆ **Immersive Cosmic UI:** Engineered a sci-fi dark-themed interface featuring an interactive rotating Earth element and custom animated astronaut assets for an exceptional user experience.
- ◆ **Asynchronous Data Processing:** Integrated external REST APIs to asynchronously fetch, parse, and map real-time weather analytics including Temperature, Humidity, Wind Speed, UV Index, and Rain probability.
- ◆ **Dynamic Forecasting:** Programmed a fluid dashboard layout displaying segmented Hourly Forecast charts and granular tracking matrices that update seamlessly based on user search triggers.
- ◆ **Native Geolocation Sync:** Implemented the browser's native Geolocation API to allow instant "Fetch Location" tracking with client-side error handling to manage location state responses.

EDUCATION

Bachelor of Computer Science and Engg.

2022 - 2026

AKTU, Lucknow
