SUMMARY

Results-driven Frontend Developer with hands-on experience building responsive, high-performance web applications using React.js and JavaScript (ES6+). Proficient in component-based architecture, reusable component development, REST API integration, and state management with Context API. Demonstrated ability to implement React Hooks (useState, useEffect), async/await API fetching, performance optimization techniques such as debouncing, and cross-browser compatible, responsive UI design. Completed a frontend internship delivering 4+ real-world production-grade projects with a focus on clean, scalable, and maintainable code.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, Responsive Web Design, Cross-Browser Compatibility

React Expertise: React Hooks (useState, useEffect), Context API, Component-Based Architecture, Reusable Components

Tools & Technologies: Git, GitHub, Vercel, REST API Integration, Async/Await, Dynamic Rendering

PROFESSIONAL EXPERIENCE

Frontend Developer Intern — Naman Digital, Bhopal

June 2025 – August 2025

- Developed 4+ real-world web applications — blog platform, e-commerce site, portfolio, and weather app — using React.js, Next.js, and Tailwind CSS, following component-based architecture and reusable component design principles throughout.
- Built and optimized reusable UI components with React Hooks and responsive design using Tailwind CSS, reducing cross-project development time by 30% and ensuring cross-browser compatibility.
- Integrated REST APIs using async/await inside useEffect for dynamic data fetching and real-time UI updates; implemented comprehensive error handling and loading state management for a seamless user experience.
- Implemented Context API for global state management in an e-commerce platform, handling cart functionality, product listing, and dynamic rendering across the entire component tree without prop drilling.

KEY PROJECTS

E-Commerce Platform | React, Context API, JavaScript, Tailwind CSS

[GitHub](#) | [Live Demo](#)

- Developed a full-featured e-commerce web application with product listing, shopping cart, and dynamic UI updates using reusable React components, JavaScript ES6+ array methods, and component-based architecture.
- Implemented Context API for global state management, enabling clean data flow, cart state persistence, and dynamic rendering across the full component tree — eliminating prop drilling entirely.
- Designed fully responsive layouts with Tailwind CSS ensuring consistent user experience and cross-browser compatibility across all mobile and desktop viewports.

GitHub Analyzer | React.js, JavaScript, Tailwind CSS, Context API, REST APIs

[GitHub](#) | [Live Demo](#)

- Built a GitHub profile analyzer using REST API integration and useEffect hooks to fetch and dynamically render real-time user data including repositories, follower counts, and contribution metrics.
- Engineered a keyword-based developer profile scoring system using JavaScript ES6+ array methods to programmatically evaluate and rank developer profiles.
- Optimized API request performance with debouncing to reduce redundant REST API calls; implemented Context API for theme management and built a responsive, intuitive dashboard UI with Tailwind CSS.

Smart Search Application | React, JavaScript, Context API, REST APIs

[GitHub](#) | [Live Demo](#)

- Built a real-time search application with REST API integration using JavaScript ES6+ array methods for case-insensitive filtering and dynamic rendering of search results with instant responsiveness.
- Managed asynchronous API fetching using async/await inside useEffect, implementing loading states and structured error handling for a smooth, production-quality user experience.
- Implemented global light/dark mode theme management via React Context API, ensuring consistent state across all components; designed fully responsive UI for cross-device compatibility.

EDUCATION

Bachelor of Technology in Computer Science — Sage University, Bhopal

2022 – 2026

CGPA: 7.70
